

Chapter Ten

Medieval Coins from the Excavations at *et-Tell* (Bethsaida) 1987–2016

Gregory C. Jenks

The current archaeological excavations at Bethsaida began in 1987 under the leadership of Dr Rami Arav, who continues as the Director for the Bethsaida Excavations Project. The project operates as a consortium with several universities participating, and its administrative center was at the University of Nebraska at Omaha until 2016. Since excavations commenced and until the 2016 season, 610 coins have been recovered at Bethsaida. There was no season at the site in 2017 and the 2018 season had not commenced at the time of writing.

The 64 coins described in this report are from different phases of the Medieval period (500–1700 CE). Fifty-four of the coins are Islamic, but this report also includes 10 Byzantine, Crusader and European coins. The 108 coins from the period after 1700 will be the subject of a separate report.

The 10 non-Islamic coins are included as they are integral to the numismatic data for the medieval period at Bethsaida. In addition to their value as evidence of the commercial and political relationships throughout the Medieval period at Bethsaida they relate in different ways to the Islamic coins. Several of them were found among coins recovered from the vicinity of Bedouin tombs.

The information in this report has been prepared in collaboration with and under the supervision of Donald T. Ariel, Head of the Coin Department, Israel Antiquities Authority. Ariel Berman was responsible for identification of the Islamic coins. I also acknowledge the contribution of David Jacobson (UK) and Peter Lewis (Australia), each of whom has assisted with the identification of particular coins. Suhair Nusair (Nazareth) has assisted me at many places with the reading and translation of the Arabic inscriptions.

The data relating to the Medieval coins is set out in several convenient tables to assist with the analysis of the information as we seek to determine what these coins indicate about human presence at the site at various points of time. The focus for this particular report is what the coins suggest about patterns of settlement on the site and about regional power relations during the 1,200 years between 500 CE and 1700 CE.

From the data presented in these tables, it is clear that we have very few coins prior to the end of the Crusader period. This suggests that there was very little activity at the site between the Late Roman period and the collapse of the Crusader kingdoms.

The **Byzantine period** is attested by just 4 coins from before the Islamic conquest, and they all date prior to 600 CE. One of them is possibly pierced, suggesting it may have come to the site as late as the Ottoman period, when it was one item in a collection of pierced coins worn as ornaments by Bedouin women. There is nothing to suggest any economic activity or any settlement on the site in the pre-Islamic Byzantine era. This lack of coins fits with the absence of structural and other material remains from the Byzantine period. Bethsaida truly had become a “lost city” despite the Byzantine interest in pilgrimage sites associated with the ministry of Jesus as described in the NT gospels.

Likewise, the **early Islamic period** is represented by just a few coins. There are no coins from *Rasidun caliphate* (632–661 CE). We have just 4 coins from the *Umayyad period*, even though there was an Umayyad palace at Horvat Minya on the northwest shore of the Sea of Galilee (which was later converted to serve as a sugar refinery in the early Mamluk period). The *Abbasid period* is represented by just 2 coins, and one of them was only found in secondary use as a Bedouin ornament (and perhaps only arrived at the site in the late Ottoman period). There are no coins from the *Fatimid caliphate* (909–1171 CE). This was a period of general decline across the whole countryside of Palestine.

There are only two **Crusader coins**: one minted in Jerusalem and the other in Constantinople. Both of them are pierced for use as ornaments in the Bedouin style and may therefore not reflect a Crusader presence at *et-Tell*.

As the Crusader control diminishes in the Galilee, we observe the rise of Damascus as a regional seat of power. This is seen in the 6 coins from **Zangid** rulers, the 6 **Ayyubid** coins (including 2 issued by Salah al-Din himself), and the 33 Mamluk coins.

The datable **Mamluk coins** are concentrated in the earlier phase of Mamluk rule, which began in 1250 CE: 2 of them are from the thirteenth century, 6 are from the fourteenth century and another 2 are from the early fifteenth century. While the majority (23) of the Mamluk coins are undatable, no coins can be dated to the late fifteenth or early sixteenth century. This correlates with the collapse of Mamluk power prior to the Ottoman conquest.

We have just two **early Ottoman coins** that are dated prior to 1700 CE. This paucity of coins suggests there was no revival of settlement in the area during the early Ottoman period after the collapse in the late Mamluk period.

In summary, when the seat of imperial power was in Cairo or Baghdad there seems to have been little interest in settlement at Bethsaida. However, with the struggle to defeat the Crusader kingdoms this site was close to ground zero, and it seems to have been occupied in the Ayyubid and early Mamluk period.

There is no evidence to date that the site was involved in the sugar industry that dominated the Jordan valley in the early Mamluk period, even though we have the remains of several sugar refining facilities around the Kinneret (see Stern 2013). We have neither the distinctive pottery associated with sugar processing nor the industrial infrastructure for a sugar refinery at Bethsaida. This may change with further excavations on the lower slopes of the site, but at this stage it does not seem that the population at Bethsaida in the early Mamluk period was engaged in the processing of sugar even if they were involved in the cultivation of cane crops on the nearby alluvial plain.

3 This is the only pre-Ottoman Islamic coin that had been pierced, whereas about 50% of the Ottoman coins were pierced for use as Bedouin ornaments. It was found in Area T, a location with many Ottoman materials, suggesting that this coin may only have been pierced in the Ottoman era. (See also two pierced Byzantine coins: #116350 and #116510, and the pierced Crusader coin: #144630.)

4 Berman advises that a hoard of these coins was found in Tiberias. This particular coin seems to have been pierced for secondary use as a Bedouin ornament.

5 Berman indicates that Zangid coins were used in the Ayyubid period, and do not reflect Zangid rule in Palestine

6 See note 5.

7 IAA cards suggest Ikhanid dynasty, but Kindler (1999: 261, No. 140) identifies this as Mamluk a coin of Al-Ashraf Sayf al-Din Qaitbay. Berman confirms Ikhanid, fourteenth century: Muhammad Khudabanda Uljaytu 1304-1316 CE or his successor Abu Sa'id 1316-1335 CE. That was a period of political and commercial alliance with the Mamluks. This explains the presence of those coins in the Syrian area.

12 Kindler mistakenly lists the basket number as 2843.

13 Kindler refers to this item as a "coin-shaped piece of copper".

14 Effaced coin recycled for its value as a weight. The image(s) published in Kindler 1999 are not of this coin, nor even two sides of the same coin.

15 Effaced coin recycled for its value as a weight.

16 Kindler lists this coin as blank, but Berman (2015) suggests a lion rampart on
